

TELEGRAPHIC SUMMARY.

An Epitome of the Principal Events Now Attracting Public Interest.

A fire started in a coke pit at Connelville, Pa., and imprisoned three men, who were burned to death.

Major John E. Blaine, paymaster U. S. A., brother of ex-Secretary Blaine, died at Hot Springs, Ark.

The Secretary of the Interior has allowed in full the claim of Granville Naylor, of Ashland, for \$408,620, on account of depredations in 1855 by the Rogue River Indians.

At Madrid Marshal Bazine was assaulted by a Frenchman with a poniard, and dangerously wounded about the head. His assailant is believed to be the correspondent of a Paris newspaper.

By the bursting of a water tank containing 100,000 gallons of water, five persons were killed and several injured at Palatin, Ill. The accident occurred on the Northwestern road while a crowd was standing on the track.

A Southern Oregon mine was "salted" and sold to an un-suspecting party for \$50,000. Rumor connects an ex-Portland hotel keeper with the transaction. The Jackson county grand jury is looking into the matter.

A terrible gale is reported to have raged along the west coast of New Foundland, causing serious loss of life and great destruction to property. Near Rose Blanche two barkes went down at their moorings, and five men were drowned.

A cyclone visited Suffolk, Va., with fatal and destructive effects. Its track was about 100 yards wide. The house of John Wright was completely demolished. Mr. Wright, his wife and young sister, and James Luke were in the house at the time. Mrs. Wright and Mr. Luke were instantly killed, the young girl fatally injured and Mr. Wright seriously hurt. Much other damage was done to property along the path of the cyclone.

Eastern dispatches state that a terrible storm swept through Missouri, Kansas and Texas. In Vernon county, Mo., thirty houses were destroyed and fifteen persons killed. The wind was preceded by a hill storm, which done considerable damage. Many of the hailstones weighed from three to four ounces, and some of them measured nine inches in circumference. They crashed through roofs, dwellings and barns, leaving holes through which a man's arm would pass with ease. The town of Prescott, Kansas, was literally wiped out of existence, not a single building being left standing to mark the site where once was a prosperous and thriving place. So far as learned fifteen lives were lost at that place.

It is thought that the loss of life and property is greater in the districts visited by the cyclone, which have no telegraph communication with the outside world.

News of a terrible shipwreck, thirty miles north of Cape Flat-top, on the Washington Territory coast, has been received at Victoria through four Indians who came overland, having spent ten days in the journey. For some time past great anxiety has been felt regarding the schooner Active, which was overdue. The schooner was owned by Gutman & Co., of Victoria, and was registered at 420 tons. The schooner appears to have been caught in a storm and dashed on the shore, where she speedily went to pieces, and all hands undoubtedly perishing as far as known. Among those who have perished are: Mr. Jake Gutman, one of the owners, Captain Gotehame, Olla Jackson, Charles Frederick and Billy Lesing, besides twenty-eight Indians. The latter named belong to Chief Klor-mat's tribe. Chief Elso Klor-mat himself was on board, the other Indians being hunters. The death of the chief is tantamount to the extermination of the tribes, and the Klor-mat tribe will soon be extinct. According to the custom of his tribe all the huts of the unfortunate men have been burned.

ROCHESTER, N. Y., March 17, 1887.

From April 1st, 1887, to April 1st, 1888, Toffer (\$100 one hundred dollars for each and every discovery of a new comet made between the above dates, subject to the following three conditions:

1. It may be discovered either by the naked eye or telescope, but it must be unexpected, except as to the comet of 1815, which is now looked for.

2. (a) The discoverer, if residing in the United States or Canada, must send a prepaid telegram immediately to Dr. Lewis Swift, Director Warner Observatory, Rochester, N. Y., giving the time of discovery, the position and direction of motion with sufficient exactness, if possible, to enable at least one other observer to find it. (b) Discoverers in other countries must send by immediate mail a full account of the discovery, as above required, to Dr. Lewis Swift, as above.

3. In the United States and Canada this intelligence must not be communicated to any other party or parties, either by letter, telegraph or otherwise, until publicly announced through the press by Dr. Swift, which he will do at once on information of the discovery. Great care should be observed regarding this condition, as it is essential to prevent duplication of announcements and for the correct transmission of the discovery, with the name of the discoverer, which will be immediately made by Dr. Swift.

Discoverers living in Continental Europe will receive their prizes from Warner's Safe Cure Establishment, 10 Schillerstrasse, Frankfurt, a. M., Germany, those living in Great Britain from H. H. Warner & Co's Safe Cure office, 47 Farringdon Street, E. C., London; those in Australasia and Asia, from H. H. Warner & Co's Safe Cure Branch House, 147 Little Lonsdale St. W., Melbourne, Australasia; for other parts of the world, prizes will be paid here.

Prizes will be awarded four (4) months after discovery and verification of claim.

Three disinterested scientists will be selected to settle any dispute that may arise regarding comet discoveries.

H. H. WARNER, Rochester, N. Y., March 15, 1887.

A MISER'S PET DOG

How a Tostler Mourns the Death of a Master Misled by No Human Friend.

Rover, the old canine friend and companion of miser Joe Perry, lonely and broken-hearted, kept a faithful watch in the silent yard of his dead master's house on Locust street. Hour by hour, day and night, he lies watching the time-worn door, and whines and paws at its rotten boards. But he doesn't upon as it was wont to do at his lightest scratch. He whines out his grief as he used to bark his opinions at neighboring curs. It would have been a charitable ending if old Rover had been found dead in the little back room with the old miser and his partner. The woman who keeps the grocery store next door to the house of gold and filth pushes food to the dog through a hole in the fence every day, but Rover seldom touches it, and is daily growing weaker.

Little Rover has a stubby tail, short legs and a shaggy coat of sorrel color hair. He was a pup when given to Perry a number of years ago. Rover was the only living thing that shared the miser's fullest confidence. When Perry would leave the house to collect a debt or visit a liquor sloop Rover was generally trotting by his side. If the miser should go away without Rover it would not be long before the dog would discover the absence of his master and start to search for him. The terrier was well known in the neighborhood.

While looking for Perry he would peep into the nearby groceries and if the miser was not to be found in the saloons the dog would soon be scratching the door of old John McGough's house. If he found Perry he would jump about him, paw his legs and give unmistakable evidence that he wanted him to come home. If Perry was ready he would follow the dog, but should his talk of avarice be not complete he would tell Rover to go and make a tour among the garbage buckets of the alleys. And Rover would go and do as directed. Some times the dog would find Perry in one of the saloons buying his daily supply of rum. If the miser lingered too long Rover would show his impatience by tugging at the tattered trousers of the miser.

On several occasions the hoarding auctioneer got a burdensome load of bad whisky aboard and was helped to his door by colored men, who repaid themselves by relieving the miser of his silver time-piece and its shoe-string chain, but it never happened while the terrier was around.

There is a pear tree in the yard and when this was bearing its fruit, there was the time that little Rover had to be vigilant. He was not only faithful and sagacious but cunning. Two years ago an eight-year-old pickaninny was peeping into the yard with his white eyeballs turned wistfully to the poor Rover. Rover saw him but pretended that he was asleep, until the darkey stepped in and made for the tree. Then the terrier made a dash for the gate and cut off the frightened lad. The dog barked his loudest and brought out Perry, who caught the robber. But it was unfortunate for the old man, as the pickaninny was vicious and he struck the miser on the head with a stone and made his escape.

Rover was caught by the dog-catchers about two years ago. It was early on a spring morning and the dog was out on a hunt for one of the old men who had slipped away for the material supply of corn-juice. The terrier had been away from the house but a few minutes when he was seen by a dog-catcher on Locust street. Rover made a heroic endeavor to get back home, but the darkey and his big net were too much for him and he was soon among whelps, mongrels and curs in the wagon of the pound man. Perry heard the yells of the dog and hurried into the street. He made a piteous appeal for the release of his terrier, but the men refused to free Rover until the owner had paid the fines for the missing dog. He was so poor that he could not find a way to do this, but he finally brought out the money and the terrier was released.

Philadelphia Times.

SUICIDE OF ANIMALS. An interesting case of the kind reported by a noted savant. I am disinclined to believe in deliberate intention of suicide in so-called "animals," for one reason among others, because I think if they were capable of entertaining the idea they would take advantage of it so often, to be rid of the miseries the human animal inflicts on them, that the present doubt would not exist. Would not half the cab-horses crawl into the Thames, and would not high-spirited mongrels doive means of being beforehand with the policeman's truncheon? Nevertheless, I have just been credibly informed of an authentic instance. A gentleman with whom I had a slight acquaintance, residing not many doors from me, went last winter to the south of France on a visit to relations. He was out of health, certainly, but it was quite expected, that the change of climate would restore him. His "faithful dog" did not "hear him company," but remained with his wife and friends. The hopes of his recovery proved fallacious, and when the news of his death came it was an unexpected grief. The dog seemed fully to understand the nature of the bereavement, and shared the grief of the family to such an overwhelming extent that one day it went to an upper window and jumped out, killing itself in a very distressing way. I may add the dog was a small terrier. —R. H. Busk, in Notes and Queries.

THE INDUSTRIAL WORLD.

Millions of washboards are made and sold annually in this country. It is estimated that not less than 7,200,000 of them are sold every year between the Allegheny mountains and the Missouri river.

The Chevalier van Flewyck, of Louvain, has just perfected, after thirty-eight years of labor, a machine for recording all music extemporized upon the piano. His invention is worked by means of electricity, and he has been assisted in the mechanical details by M. Kermis, an engineer of Brussels.

Yours truly, R. E. D. TICHBORNE.

MISCELLANEOUS.

Smoked red, whatever they may be, is named among the new fashionable colors. —Chicago Herald.

In New York City there are said to be 8,000 families who receive help from charitable associations and the city.

A wonderful gold mine has been discovered in Sonora, Mex. The miners get pure metal by breaking the quartz with hammers. —The double-turret ship Trafalgar, which is the largest armor-clad that has ever been built at Portsmouth, England, is to be ready for launching next September. She was only begun last January.

A farmer near Waldron, Mo., has a healthy four-months-old pig that has two feet on each leg, and on each foot five toes. Such a breed of pigs would be profitable in a community partial to pickled pigs-foot. —St. Louis Post.

The London Christian World rightly says that "the promise to pay for a newspaper is neither more nor less sacred than promise to pay for a farm."

Dear reader, have you paid for your paper? —United Presbyterian.

The candied sweet potato is a Philadelphia confectionery. It is nothing but sweet potatoes carefully boiled and quartered and then candied in boiling sirup, but it is said to be dainty and tender and of delicious flavor.

A mine of beryls is a new find in Connecticut. The beryls already taken out include the variety known as golden beryls, and rank as precious stones only two places lower than diamonds. There are also other brilliant colors found in this mine. —Hartford Courant.

Berlin is to have a new Roman bath-house on a grand scale and furnished with all ancient and modern luxuries. Among the novel features will be a laundry in which guests can have their clothes washed and ironed while they are bathing.

An elderly gentleman who delights in calculations contributes this: "If the immortal George Washington, when he was forty-eight years of age, had stepped into a railroad office and pawned his little hatchet for a ticket to the planet Mars, he would at the rate of fifty miles an hour, have arrived there this year." —St. Albans Messenger.

The coast of Norway is sinking gradually, while that of Sweden is emerging more and more, and the Baltic is becoming shallower. Landmarks made on the Swedish coast by the celebrated naturalist Linnæus, at the beginning of the eighteenth century, show that this upheaval raises that coast about four feet in the course of a century.

Twenty-year-old James Manley, of North Hastings, while out in the woods with an axe and dog, came upon a big buck. The dog started in pursuit, the deer slipped on the ice and his antlers became entangled in some brush, and Jimmy, rushing up, killed the deer with one blow of the axe. He is the proudest boy in Canada. —Montreal Witness.

There was a missionary concert at a Rockland church the other evening, and among other things was a paper on "missionary work read by a young lady. When she had finished, the leader of the meeting said: "We will now sing Hallelujah, 'Tis Done.'" Whereat everybody smiled. —Rockland Courier-Expositor.

Prof. Rogers, of Waterville College, Maine, has recently compared fourteen of the most trustworthy thermometers in the town with his standard instrument. Tests were made at six grades of temperature, or eighty-four tests in all, and in only four of these were the town thermometers correct. In eighty cases they were all wrong from one-fourth of a degree to four degrees, while one instrument was eleven degrees out of the way.

Luke Lawson's dog barked at Allen Ballantyne as he was going to school. He went home and got a revolver, and when the dog barked at him again fired. The ball went wide of the dog, but crashed through a window and struck Mrs. Lawson in the breast as she sat rocking her baby. She lived but a few moments. Young Ballantyne told his father what had happened, and the old man handed his son over to the authorities. This was at Lake George, N. B.

A Norwegian engineer, W. C. Moller, has found that reindeer hair and skin possesses remarkable buoyancy; and when the unshorn skin is used as a life-belt, it has the advantage over cork of warning the wearer while in the water. He attributes great value to suits made from reindeer hair, one of which of the weight of a pound may keep a man from drowning, while it furnishes greater protection from cold than oilskin and other materials.

How It Struck Him.

It was a little newly-arrived sister that nurse held in her arms and seven-year-old Robbie stood jealously inspecting her.

To his mind she looked smaller and less attractive than any little sister of the other boys that he could remember, and he felt a keen thrill of disappointment. So he put his hand deep in his pockets like papa, wrinkled up his nose, and regarding the new acquisition savagely, said:

"Well, I call that pretty near a failure!" —Detroit Free Press.

THE TICHBORNE CASE.

Engishmen will take undoubted interest in anything covering one of the most remarkable cases on record, and the following letter from Sir Roger himself will throw some light upon his present status. It is dated 115 Fourth Avenue, New York, N. Y., February 22nd, 1887, and reads as follows: Gentleman—For the last four months I have suffered with rheumatism, and every time I sat down and got up I suffered the most intense agony; in fact, I was not able to move my legs without pain, and when going down stairs the pain was too dreadful to bear. I was recommended to send for a bottle of St. Jacobs Oil and try it. I did so, and to my great surprise and delight I found it an almost instant cure. I have only used one bottle up to the present, but I can now sit down, get up, and walk about without the slightest pain.

Yours truly, R. E. D. TICHBORNE.

WHO KNOW HIS VALUE?

That is a fair question in regard to anything and as "Compound Oxygen" is now the most complete sort of an answer by any applicant to Dr. STANLEY & FALLEN, 1200 Arch Street, Philadelphia, Pa., who have names to whom they may with full consent refer in nearly every State and Territory of the United States. Judge Kelley, "father of the United States House of Representatives," heads the list of willing witnesses. Every profession and occupation is represented. Some of the literature on the subject, which will come to you free.

Orders for the Compound Oxygen Home Treatment will be filled by H. Matthews, 615 Powell Street, San Francisco.

The longest span of wire in the world is used for a telegraph in India, over the river Kishna. It is more than 6000 feet in length, and is 12,000 ft. high.

A SUGGESTION TO THE IR-VELLING PUBLIC.

Tourists, emigrants and others find that Hoopland's "Compound Oxygen" is a most safe and reliable medicine, and is especially adapted to the stomach, liver and bowels, which are apt to be deranged by the irregularities of long voyages, or journeys in latitudes adjacent to the equator. It is especially useful as a preventive of cholera, and is also a most valuable remedy for all the ailments of the stomach, liver and bowels, which are apt to be deranged by the irregularities of long voyages, or journeys in latitudes adjacent to the equator. It is especially useful as a preventive of cholera, and is also a most valuable remedy for all the ailments of the stomach, liver and bowels, which are apt to be deranged by the irregularities of long voyages, or journeys in latitudes adjacent to the equator.
